AquaHeat

Radiant Heat & Snowmelt

AquaSeal

Pex Piping & Plumbing

Terre-Pex

Pre-insulated Pex-A Piping Systems

Integrating the best technologies by delivering optimal performance and efficiency.

AquaHeat

Radiant heating and snow melting products.

The widest selection of pex pipe under one banner anywhere Pex-A, Pex-B, PERT, and Multi-layer pipe for best features and price points. ProMix and ProLock manifolds and controls provide best distribution and control solutions.

AquaSeal

Pex piping and plumbing products.

Pex-A and Pex-B in Red, Blue and Natural colors in a variety of lengths make plumbing with pex fast and easy.

TerrePex

Pre-insulated Pex-A Piping System

Insulated Pex pipe systems for direct burial delivering energy with minimal BTU loss.

TECHNOLOGY INTEGRATION

Implementing new products and tools while embracing proven legacy products delivering what customers promise.

CONTROL AT ANY LEVEL

RESIDENTIAL, COMMERCIAL, INDUSTRIAL

Adding and removing energy precisely for maximum comfort and efficiency. Providing sufficient systems for fastest return on investment. Re-inventing processes while reducing energy consumption.

TIME HONORED FORWARD THINKING

While the concepts and tools are as old as time, new technologies serve to redefine and reapply known value for greater achievement of needs and goals.

DELIVERING TOMORROW'S TECHNOLOGY TODAY

Building with ComfortPro Systems means compatibility with the next generation of appliances not yet invented.

AquaHeat System Solution

Plumbing, heating and cooling systems work better when they work together. That's why ComfortPro delivers a total, integrated solution that's smart, simple, and as energy-efficient as possible.

Demand a better approach

Most others offer single solutions, only ComfortPro has the range of products - and depth of experience - to provide a thorough, solutions-focused approach that maximizes heating and cooling output while minimizing time and effort.

The ComfortPro line of products

Our business is to understand the unique needs of your job and deliver the very best system for it.

A better approach, A better system.

Benefits & Approvals

AquaHeat and AquaSeal uses only crosslinked polyethylene tubing. Known as PEX, crosslinked polyethylene offers distinct advantages over both metal piping materials and other plastic alternatives. Our pipe is virtually maintenance free. It is corrosion resistant, flexible, and remarkably clean. Long used worldwide, PEX has an outstanding and unblemished track record of quality performance. PEX's crosslinked molecular structure offers toughness and lasting durability. Our crosslinked polyethylene piping withstands temperatures ranging from below freezing to above the boiling point. Because it is pliable, a section of 1/2" pipe can be bent into a 3" (77mm) radius at 68 F (20 C) without affecting tubing integrity. The material is highly crush resistant and can be submerged in concrete or earth without any damage.

Approvals

AquaHeat and AquaSeal PEX pipe has been manufactured to ASTM F-876/F-877/F-2023/E-84/F1960/F-2080, NSF-61, ICC & CSA B137.5 and approved by CSA, IAPMO and ICBO for use with potable water systems. AquaHeat is certified for continuous use at pressures of 100 psi and temperatures up to 180 F.

AquaSeal Pex pipe meets the requirements of ASTM F-2023 chlorine standard. AquaSeal is certified for continuous use at pressures of 100psi and temperatures up to 180 F.

The AquaHeat brass fittings are not approved for potable water use and do not meet the lead free requirements of ASTM F1807 & CSA B137.5 standards.

AquaSeal brass fittings and valves meet the lead free requirements per U.S. Senate Bill S.3874 less than 0.25% Pb. NSF 61G, of ASTM F1807 & CSA B137.5 standards. Fittings with soldering or brazing end conform to ASME B16.22 and NPT male thread, NPSM female thread conform to ANSI/ASME B1.20.1.

The AquaSeal ProPlas plastic fittings meet the requirements of ASTM F-2159 & CSA B137.5 standards.

It is the sole responsibility of the installer to verify that the product meets local standards.

AquaHeat, AquaSeal and ComfortPro® Systems are registered trademarks.

PEX-A Piping 94900 series

AquaHeat Pex-A tubing is made using the Engel method. **The Engel method** is a hot cross-linking process, meaning the actual cross-linking takes place during the extrusion process when the base polyethylene is above its crystal melting temperature. The Engel method provides more precise control over the degree, consistency and uniformity of cross-linking. This means the tubing is evenly cross-linked, with no weak links within its molecular chains.

PEX-B Piping 93000 series

AquaHeat Pex-B pipes are manufactured from special HDPE resins. The cross-linking is performed in a state of the art Silane accelerator post extrusion resulting in an excellent and even cross-linking. The cross-linking renders the pipe improved mechanical process such as resistance to corrosion, pressures at high temperature, superb abrasion and chemical resistance. Product is coated with EVOH barrier which prevents oxygen from entering the system through the pipe wall. Products are manufactured in red color. AquaHeat Pex-B pipes can be used with the following ASTM fitting systems: F2159, F1807, F1960, and F2080.

Pentagol is a five-layer Pex heating pipe with exceptional barrier properties and flexibility.

- Full UV Protection
- O2 Barrier is protected from scratching and abrasions
- O2 Barrier is protected from moisture
- Completely quiet with no expansion noise, ideal for wooden floors
- Ideal for snow melt, pole barns, high traffic areas during construction and extended exposure

Heat-PERT Piping 91000 Series

AquaHeat, Heat-Pert pipe is a 5-layer pipe made from Dowlex 2344 resin offering high temperature and pressure resistance without cross linking of the pipe. PERT stands for Poly Ethylene Raised Temperature and carries ratings up to 180F at 100psi. It has superior flexibility and can be used in both radiant and snow melt systems. It is manufactured to ASTM F2623 and is approved by NSF and CSA. Oxygen diffusion meets DIN 4726 which limits oxygen permeation through the pipe wall. "It is SDR9 Sized" pipe and can be used with any ASTM F1807 or F2159 fittings.

1/2" Metal Bend Support	86115	1
5/8" Metal Bend Support	86116	1
3/4" Metal Bend Support	86117	1

Pipe Tracking

- Provides even spacing & heights
- Fastens to concrete, wood & foam board
- Accepts 3/8" - 3/4" Pex piping
- No wire or lastc ties
- Saves time and labor

Description	Part #	Qty
3/8", 1/2", 5/8", 3/4" x 39.5" Pipe Tracking	89122	1
Staples for Pipe Tracking	82050	500

Tube Talon & Cable Ties

Description	Part #	Qty
1/2" Tube Talon w/Nail	12005	100
3/4" Tube Talon w/Nail	12022	100
1" Tube Talon w/Nail	12028	100

Manifold Control Module / By-Pass Set

AquaHeat

The ProMix manifold extension controls the 2013 series manifold supply water temperature by mixing supply and return water and limits the supply temperature flow through the manifold for wooden flooring. The integrated pressure by-pass relief allows to operate the manifold directly off a high-temperature primary heating circuit or boiler with a maximum heating capacity of 51,000 BTU's.

- Connects directly to ProMix 2013 manifolds
- 190 degrees F maximum operating temperature
- 145 PSI maximum operating pressure
- 113-140 degrees F setting range
- Injection valve preset at 131 degrees F

The ProMix Differential pressure by-pass can be installed directly on to the ProMix 2013 1" manifolds and can be adapted to fit the 2015 1-1/4" manifolds. The manifold by-pass allows for constant pressure in individual manifold loops or zones independently of the number of open zone valves

Floor Plan Drawing

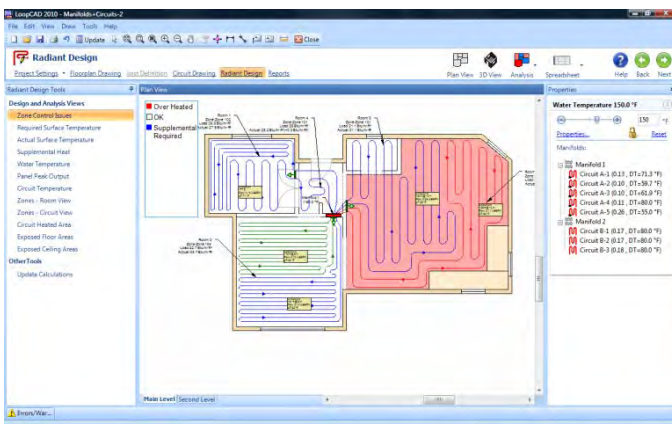

Creating floor plan drawings is very fast using the predefined rooms, doors, windows and other objects. Rooms can be resized by dragging the walls or corners, and are easily docked together to create complex floor plans. The room shapes can be quickly edited to create very complex shapes, and you can also use the freehand drawing tools to create more complex shapes. LoopCAD also allows you to import an existing AutoCAD, PDF, or scanned drawings to use as a template.

Hydronic Calculations

The hydronic calculations that are critical to your radiant system design are performed automatically. The Radiant Design view provides an easy way to analyze and optimize your design.

- panel heat outputs
- Surfaces temperatures
- Panel temperatures
- water temperatures - supply and differential
- Flow rates and head losses
- Contrallability issues

NEW in LoopCAD 2022

- Updated to the current ASHRAE Climate Data
- New Graphics Engin for improved performance & views in 2D & 3D
- many other New and Enhanced Features
- Still the **Premiere** software for professional quality circuit layout drawings for radiant heating systems!

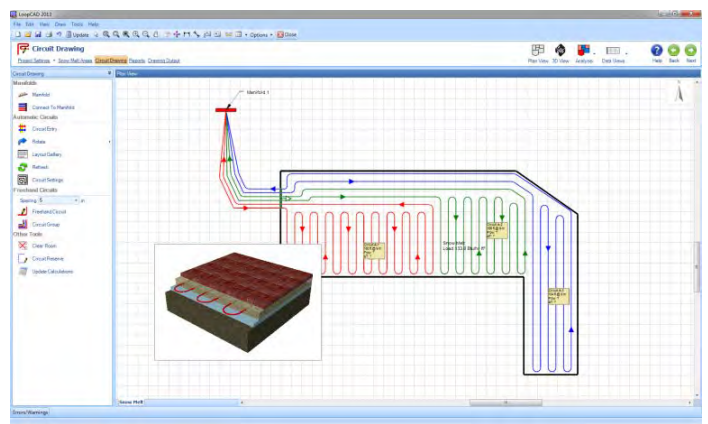

Automated Circuit Drawing

LoopCAD automatically generates circuits for the rooms in your project. Simply drop a Circuit Entry object where you want the circuits to start, and LoopCAD takes care of the rest. You can design around obstructions, like stairs, cabinets or kitchen islands. Easily edit the settings to change pattern type, rotation, number of circuits, or tube spacing options. Use the powerful Layout Gallery tool to quickly select the best pattern for your design. For room geometries too complex for automated circuits, the Freehand circuit tools let you quickly draw the exact circuits that you want.

Snowmelt Design

Snowmelt system design is now directly supported in LoopCAD. Draw snowmelt areas, generate circuits, calculate loads and temperatures in much the same way as you do for radiant heating systems. Calculations are based on ASHRAE methods.

AquaSeal

Product Properties

HDPE Outer Jacket

This corrugated high density polyethylene casing provides the necessary mechanical protection and water sealant properties, and is shock-resistant, even at sub-zero temperatures

Insulation Properties

The insulation of Terre-Pex pipes is fully composed of micro-cellular cross linked polyethylene foam with a closed cellular structure, permitting low water vapor diffusion, good insulation and resistance to extreme temperatures and is not water soluble like competition using polyurethane.

Pex-A Pipe

Plastic pipes have more than proved their quality in recent years. They are flexible, heat and pressure resistant, non-corrosive and lightweight. The Terre-Pex pipe is supplied with pipes manufactured according to the Engel process.

Applications

Terre-Pex Piping Systems are a complete line of flexible piping from 1" to 4" in size with all required accessories for cost effective and permanent installations of:

- District Heating and Cooling** running hydronic lines between buildings with minimal energy losses, through unheated spaces, and for extending traditional distribution systems easily and economically
- Underground Piping Systems** direct burial of lines up to 328' in length without joints for chilled water, condenser water, or any subterranean system requiring minimal heat gains/losses
- Plumbing Systems** for networked cold, hot, and recirculated water lines between buildings, to external or remote facilities such as barns, animal sheds, etc.
- Radiant & snowmelting Systems** for feeding remote manifold boxes or adding onto existing systems
- Interior Building Piping** to provide the quickest and most guaranteed installation of piping systems with no couplings or joints, already insulated to save time and money at the jobsite, and allow maximum flexibility of carrier pipes through difficult spaces.

Terre-Pex Insulated Pipe System

Terre-Pex Insulated Pipes are the ideal solution for delivery of hot and chilled water where the energy preservation is key. Terre-Pex insulated piping provides the highest bending flexibility in the industry and thus minimizes overhead in project related pipe system considerations.

We differentiate Terre-Pex insulated pipes with either single or double carrier pipes for convenient supply and return piping based on project needs.

Terre-Pex insulated pex-A pipe can be delivered in any length required up to full coils of 328 feet. ComfortPro Systems provides a cut-to-length quick ship service for your project's needs. There is an additional cut fee per cut with this service. With a wide selection of pipe diameters in stock CPS can provide the right solution for your application requirements.

ComfortPro Systems also offers a full selection of pipe matching brass fittings 1" to 4" (110mm)

Energy Efficiency of Terre-Pex Pipes (R-Value)

Insulation Efficiency is commonly referred to as R-value. The tables below show R-Values for Terre-Pex Single and Double pipes.

Terre-Pex

Quick Installation

1. Simply dig a trench (Minimum 24" deep)
2. Place 6" of sand into trench
3. Lay the Terre-Pex pipe in the trench
4. Cover over with fine earth or sand
5. Connect to appliance or wall outlet, e.g. boiler or heat exchanger

No compensation elements needed since the pipe moves inside the HDPE jacket with temperature.
